PvP Panel (CC Panel)

Overview

The **PvP Panel** (also called the **CC Panel**) is one of the most important and user-friendly modules in Sylvanas. While fully optional, this panel unlocks **next-level control** over your **crowd control (CC)** strategy in PvP.

Unlike most rotations that aim to automate everything, CCs are **more about *when* you press them, rather than *how fast***—timing is everything. The PvP Panel gives you that perfect control without making CC a chore.

1 – What is the PvP Panel?

The **PvP Panel** appears as an on-screen interface containing customizable buttons, each mapped to a specific CC spell (stuns, fears, traps, etc.). You can **click them manually** or assign **keybinds** for faster access. Once triggered, the system handles the rest—**smart conditions, checks, and chaining logic** are already built-in.

You can freely **hide or reopen** the panel at any time through the plugin settings.

2 – Why Manual, If It’s Smart?

This is not just a button that casts your CC blindly. Behind every click, there are **dozens of automated safety checks**:

- Does the target have **DR (Diminishing Returns)**? If yes, it may **wait for the DR to reset** to maximize CC value.
- Is the enemy in another CC already? The system can **chain CCs** automatically when the current one is about to expire.
- Is the target under **immunity, grounding, or reflect**? The panel will **wait until it's safe** to cast.
- Is your CC the **best choice in this situation**? If another enemy is near death, the logic might let the CC go through anyway.

The manual part is just the *decision of when*. Everything else—execution, safety, timing, chaining—is handled for you.

TIP

Think of it as calling the shot, while Sylvanas takes care of everything else. One click = perfect execution.

3 – Smart Chaining and DR Logic

Let's say you want to **stun the healer**:

- If the healer is **already blinded or trapped**, your CC will **not fire early**.
- It will **wait and chain** your CC at the **last possible moment** to maximize uptime.
- If **Grounding Totem** or **Reflect** is active, it will wait for them to **expire or be baited**.
- You can customize whether to **ignore DR** entirely, or allow **exceptions** (e.g., "cast anyway if we can secure a kill").

This is why we say it's not a dumb button. It's smarter CC—with **your timing, not guesswork**.

4 – Customization and Keybinds

Each button on the PvP Panel is fully configurable:

- Assign **keybinds** for faster access.
- Control **DR behavior, prioritization, and special conditions**.
- Enable or disable **chaining, pre-checks, or DR safety** individually.

NOTE

These settings should be inside the rotation menu, depends on which rotation / plugin you are using. PvP Panel unlike other core features its based on the rotation itself.

Why This Matters

In high-rated PvP, **control wins games**. The difference between a good CC and a game-winning one is often just **better timing**.

With the **PvP Panel**, you don't need to micro-manage targeting or spell conditions—you just need to make the call. **Sylvanas will deliver the perfect CC, at the perfect time.**

You get the power of scripting, with the intelligence of automation, **without losing control**.

TL;DR:

- Optional panel to make CC **easier and smarter**.
- Fully supports **keybinds, chaining, DR logic, and trap protection**.
- The CC doesn't fire blindly—it waits for the **optimal moment**.
- You press it when you want—**everything else is automatic**.
- Built for serious PvP players who value **timing over spamming**.

TIP

CC like a pro, with just one click. Smart logic. No stress.
