Project Sylvanas Documentation Combat Forecast Library Health Prediction Library Scripting Reference > Documentation > User Docs > Getting Started Unit Helper Library Getting Started Target Selector PvP Helper Library Overview PvP UI Module Library Inventory Helper In this document, you will learn how to setup and begin playing with Sylvanas. It's a very simple procedure, but we will Dungeons Helper try to explain everything thoroughfully. Custom UI Custom UI Functions 🛭 Barney's Basic Guide (With examples) 🎯 Welcome Letter User Docs First of all, thanks for choosing Sylvanas. We know that our unique approach might be scary at first and appreciate Common Issues those adventurers who deposit their trust on us. We have invested a lot of time and passion in this project and we How To Get Gold want to make it as close to perfection as possible. Of course, we know that this is a long way, but with your feedback Getting Started we are confident we will get there very soon, since we have all the tools required for it. You are also welcome to become a Lua developer here with us! Check Getting Started - Developers Multi-Session Setup Menu Without further ado, let's begin playing with Sylvanas 🛭 Control Panel Target Selector (i) NOTE Spell Queue • Supported OS: Windows 10 1909 to Windows 11 24h2 Combat Forecast • Suported DX version: 12 (In WoW Settings, navitage to System -> Graphics -> Graphics API -> Set to DirectX 12) **Health Prediction** Universal Kicks Universal Utility Universal Items Step 1: Register on the Website Universal Racials Universal Dispels Head over to our official website and create an account. To create an account, press the login button and in the new PvP Panel (CC Panel) page, press Create Account: **Rotations Guides** Press the Login button < > C VPN ← project-sylvanas.net Vid Binge | Stream Y... Under Construction Press the "Register Now!" button Login Username Password Enter your password Login Alternatively, sign in with: Login with Discord Don't have an account? Register now! • Finally, just enter your new username and password, verify the captcha and click the Register button. Step 2: Get Gold To fully enjoy the Sylvanas experience, you need to acquire **Gold**, our in-game currency that unlocks subscriptions and additional features. There are two ways to purchase Gold: All Gold purchasing is handled on the dedicated page: How To Get Gold (i) NOTE If you encounter any issues during the purchasing process, feel free to open a ticket on our Discord server for support. Step 3: Manage Plugins Sylvanas plugins live in two places: 1. Plugin Marketplace Link: https://project-sylvanas.net/panel/plugins/marketplace Browse all available plugins (free and paid). o Click **Buy** (even free plugins cost "0 Gold") to add them to your **Plugin Library**—this ensures every plugin can be monetized or updated consistently. 2. Plugin Library Link: https://project-sylvanas.net/panel/plugins/library o Toggle any purchased plugins **On** or **Off** at will. o To apply changes in-game, click the **Refresh** button in the top-left of the Sylvanas menu. Sync & Updates: • Every time you **inject** Sylvanas, your library automatically syncs: Adds newly enabled plugins into WoW. • Removes plugins you've disabled on the website. Fetches any plugin updates. • Manual refresh in-game is only needed if you change your library mid-session and want to apply those changes without reinjecting. (i) NOTE This is where the reload button is ingame Step 4: Download Your Personal Loader Navigate to https://project-sylvanas.net/panel/loader • Click **Download**. The server will generate a **unique** ZIP for your account. • You'll see a ZIP password on that page (currently wow2025, but this may change). Download the loader and execute it in the location where you want your Sylvanas files to be stored. The loader will automatically download and generate necessary files, including scripts and other resources. (i) NOTE Create a folder to store the loader, don't throw it on the Desktop, and open it from there directly because all the files like the Lua scripts that the loader will automatically download will be spread throughout your Desktop. (It's not like you are not allowed to do this, it's just a recommendation) Unblock the Loader (If Needed) If Windows or your antivirus flags the loader: Right-click the Loader.exe → Properties o Keep in mind your loader wont be named Loader.exe, it will probably have a random name like 86484e88807d0b9c.exe • On the General tab, look for "This file came from another computer and might be blocked..." • Check **Unblock** and click **OK**. Step 5: Run & Inject 1. **Run** the loader **before** opening WoW. On your first run, one of two things may happen: Success: Loader opens smoothly and you see the login form. ■ Error: An alert appears—refer to Common Issues or open a Discord ticket if it's not listed. 2. In the loader window, enter your website **Username** and **Password**, then click **Login**. 3. Choose your desired version (or leave on Automatic), then click Inject. 4. Launch wow.exe —Sylvanas will already be injected and ready to play. **◯** TIP You don't need to close Battle.net or the WoW launcher—just ensure wow.exe isn't running when you hit Inject, and you'll be good to go. Step 6 (Optional): Join the Discord Server Once registered: • Click the Discord icon on our site (top-right) or go to https://discord.gg/SDe3ze5bPx Open a ticket if you find any issue or you want to get a free trial before purchase In-Game Controls When in-game, you can manage Sylvanas with these keys: • Press F6 to reload scripts. • Use INSERT to open and close the main menu. • Use DELETE to open and close the console. (i) NOTE The console also has a handy "Copy All" button—great for sending Lua error logs to us via Discord tickets or direct messages. Enjoy playing! We hope you enjoy Sylvanas as much as we enjoy working on it! Q TIP

ctrl K

Overview

Step 2: Get Gold

Step 3: Manage Plugins

Step 5: Run & Inject

In-Game Controls

Step 1: Register on the Website

Step 4: Download Your Personal Loader

Step 6 (Optional): Join the Discord Server

Unblock the Loader (If Needed)
